WordPerfect 6.0 import filter for Windows PageMaker 5.0
Aldus Corporation
November 1993

The new WordPerfect 6.0 import filter lets you import files created in WordPerfect 6.0 into PageMaker 5.0. Features supported by the WordPerfect 5.x import filter (which shipped with PageMaker 5.0) are also supported by this new filter. In addition, the following features have been added specifically for WordPerfect 6.0 users:

- The WordPerfect 6.0 import filter imports styles in a WordPerfect document automatically.

- This new filter has limited support for WordPerfect tables; PageMaker 5.0 uses tab stops to separate and align table columns from imported WordPerfect 6.0 tables.

To install the new WordPerfect 6.0 filter:

Copy theWP6IMP.FLT file to the ALDUS\FILTERS directory.

Additional notes

The filter recognizes WordPerfect documents with the filename extensions .WP, .WPD, and .WP6, so be sure the file you want to import uses one of these extensions.

Because WordPerfect 6.0 supports a newer version of the .WPG (WordPerfect graphic) file format than PageMaker 5.0, you will be unable to place .WPG files included with WordPerfect 6.0 in your publication.

More information available

For a list of features supported by the WordPerfect 5.x import filter, refer to the "WordPerfect 5.0/5.1" topic in PageMaker 5.0's online Help.
