
PC-Link it's back!

There is a new network in town. PC-LINK! Why PCLINK? Because most of us have grown tired of all the politics, that go along with echo mail networks, steering committees, and network coordinators that need a ruling on everything before it happens. The dues, the donations, and policies, not to mention politics, backstabbing and other not so desirable stuff.

This one is free folks, it's not going to cost you a dime, (except possibly to poll your local feed. We at PC-Link would be honored to have your bulletin board, as a member of our network. It would provide better communication, between all the sysops and users in this area. Everyone is welcome to join the net. You are responsible for setting up your own mail network interface.

Fido net style messages - Basically you need to setup a mail interface, such as Frontdoor, BinkleyTerm, Dbridge, or Intermail. A mail tosser such, as GECHO, or Squish, and an interface for your bulletin board system.

Rules & Regulations of the network. Really simple only THREE rules.

(1) Messages sent across the network MUST be sent with the user's real name. Except otherwise specified. We currently have two conferences, that allow aliases.

(2) NO FOUL LANGUAGE! (Other than the sysop's conference! <GRIN> I don't want to waste my time, reading a bunch of trash! I'm sure you'll find, people that write trash messages, have nothing important to say!

(3) The buck stops with you! You are responsible for what happens on your bulletin board, and what messages echo across the net. If problems arise with one of your users, it's up to you, to suspend their activity in the net.

PCLINK NETWORK APPLICATION

Use The Included MAKEREQ.EXE to Create Your Application, And Send The Completed Application To Your Closest Mail Hub / Host.

It will create a file called *.APP, with your name as the filename.

You can either netmail it, or just upload it. After we recieve it we will contact you shortly.
