

PANTONE color libraries for Windows PageMaker 5.0
Aldus Corporation
December 1993

This disk provides you with three improved PANTONE color library files: PANTONEC.BCF (for coated stock), PANTONEU.BCF (for uncoated stock), and PCSGE.BCF. PageMaker 5.0 reads information from these files when you choose "PANTONE COATED," "PANTONE UNCOATED," or "PANTONE Process Euro" from the "Libraries" option in the "Edit color" dialog box.

These updated .BCF files greatly improve process simulations when proofing spot or process color work. Earlier versions of these files, included with PageMaker 5.0 retail and upgrade packages, could produce inadequate process simulations when proofing spot colors targeted for coated or uncoated paper or process colors from the "PANTONE Process Euro" library.

To use the updated color libraries included on this disk, simply use the Windows File Manager to copy the three files to the COLOR directory in the language subdirectory (USENGLSH, for example) in the ALDUS directory on your hard drive. Click "Yes" when Windows asks if you want to replace the older versions of the .BCF files.

We suggest you store this disk with your original PageMaker 5.0 disk set, so that if for any reason you reinstall PageMaker 5.0, you will have the improved color library files to work with.
