datel   09/15/88

date   32401

          This macro will convert a date entered as MM/DD/YY to the Lotus
          serial number so it can be used by the Lotus formulas and also
          formatted using the "/ Range Format Date" commands. By changing
          the "4" on the third line above to a "1", or "2", or "3" you
          can change the format of the cell containing the date
          automatinally.

          To invoke the macro hold down the macro key (Alt on most
          computers) and press the "d" key.

          If you combined this with another spreadsheet you will have to
          name the column to the right of the \d. To do this place the
          cursor on the \d and press slash (/), Range (R), Name (N),
          Lables (L), Right (R), Page Down and Enter. This will name the
          column to the right of the \d with the names in the column
          with the names under the \d.

                                                           02/22/1988
