        {if PWORDIN<>MYWORD}{WIPEOUT}  
        {blank PWORDIN}{home}
```

WIPEOUT /qy

PWORDIN

MYWORD macros

This is a simple macro for securing spreadsheets. To use it change the word "macros" above to any password you select. When you subsequently retrieve this spreadsheet it will prompt you for your password. If you get it wrong you will be sent out Lotus 123; if you enter the correct password you will enter your spreadsheet as normal from the HOME position. This macro must be named \0 for it to work properly. I suggest you combine it into an out of the way location such as HA4000 on the spreadsheet you want to protect. This is not as sure a protection as is the Lotus password as a file combine will retrieve this spreadsheet and won't when using the Lotus password.

This macro will begin automatically if named \0.

If you combined this with another spreadsheet you will have to name the column to the right of the \0. To do this place the cursor on the \0 and press slash (/), Range (R), Name (N), Labels (L), Right (R), Page Down and Enter. This will name the column to the right of the \0 with names under the \0.
