20

/bea1~ {while a1<20,increment}

{let a1,a1+1} {tone 5,500} {goto a1}{edit}~ {ret} A sample use of the {while...} macro

Alt-A to Start. Erase the counter cell While the value of cell A1 is less than 20, a call is made to subroutine INCREMENT.

This is subroutine INCREMENT, i.e., Named range - INCREMENT. It increments the value in A1 by one. Note that the last command in the subroutine is RET so the pointer may return to the calling locattion in {WHILE....} The {goto} and {Edit} combination is to force an update of cell A1.
