## Instructions

### 1. Entering Training/Race Results

Pressing Alt and M together will bring up the menu. The first two choices, 1-DATA and 2-DATA will allow you to select the month for data entry. 1-DATA is for the first six months of the year, 2-DATA is for the second six months.

After selecting the appropriate month, you will come to the data entry screen. Move the cursor to the right date. For each run you will have to fill in the distance and time columns. Distance can be in either kilometres or miles, as long as you are consistently using one or the other. The pace calculations will be the average minutes/kilometre or minutes/mile depending on which you use.

The only (I think) cumbersome part of the program is the time entry. You have to make sure the time is entered in the proper format. This is:

It is essential that the quotation marks " precede the numbers when you enter the time (the " won't show up on the screen - this is okay). Then, the time format is hours:minutes:seconds. So, a run which took one hour, eight minutes and twelve seconds would be entered as "1:08:12. A forty-five minute and five second run would be entered as "0:45:05. If for some strange reason you decide to run for 10 hours or more, the program will accommodate you as well.

Once you enter the information, the pace will be calculated and that run will be added to the monthly total.

If you wish to keep separate track of your race results, type r over the date of the race. This will allow the program to collect the race results for a display. Type in the rest of the entry as you normally would.

### 2. Viewing Monthly and Yearly Totals

The TOTALS selection on the main menu will bring you to a summary table of the year. If you want to add a total from previous years to come up with a lifetime total, enter the number in cell AR19.

### 3. Viewing Graphs

The GRAPHS option on the menu presents a bar graph of the year to date. In order to have the average pace on the same graph as the total miles, the pace has been multiplied by ten (a 7.1

## Sheet1

minute average pace would show up as 71 on the graph).

### 4. Comparing runs and race results

The COMPARISONS-DISTANCE selection allows you to view all of the entries for a given distance. You will be prompted for the distance, and once it is entered the screen will display all the runs of that distance.

The COMPARISONS-RACE selection will present all of your race results on a single screen. This option will only work if you have been entering r in the date cell for your race entries (see above)

### 5. What is WHAT-IF

The WHAT-IF selection is used to estimate finishing times for different length races based on a given pace. They are currently setup for kilometres, so the pace you enter will have to be minutes/kilometre. Enter the desired pace in the pace column beside the race with the appropriate length. The pace will have to be entered in the usual format: "0:00:00

### 6. Saving and exiting

The SAVE selection on the menu will both save the file and exit the program. If you want to save without exiting, use the standard 1-2-3 menu system.

### 7. Rename the file

One final suggestion: This program is set up to collect information on an annual basis, which means if you want to use it for a second year, you'll have to erase all of the data you've entered during the previous year. To save the bother of doing this, I would suggest you rename the file the first time you add data to it. I keep the blank file named run.wk1, and then rename the others run93.wk1, run94.wk1, etc. To do this, use the 1-2-3 menu File-Save option, and type in run93 (or whatever) for the filename. This will create a new file while also retaining the original blank one for future use.
