Scientific and Engineering Tool for Lotus 1-2-3

Version 1.2

Copyright (C) 1987-1992 K.I.T.A.L. Software, all rights reserved

1-2-3 and LOTUS are registered trademarks
of Lotus Development Corporation

Developed and Written by Israel Kehaty

Using this program the user can do:

- Simple arithmetic
- Functions editing and calculation
- Physical units definition and conversion
- Integration and Differentiation of functions/tables
- Editing and calculating statistic functions
- Frequency and normal distribution
- Curve fitting (4 types)
- Root finding (including non-linear equations)
- Matrix operations
- Simultaneous linear equations

Sheet1

THIS IS AN EXAMPLE OF A DESCRIPTION DUCUMENT

This function calculates the cosine of an angle. The cosine is written in Lotus as @COS(). If you are not familiar with trigonometric functions any good college book will help.
