

## Preferences (Icons/Fonts) - Page 5 of 7

- **Show CC's Startup Icon:** If this option is enabled, Conflict Catcher will display its icon. You can disable it if you don't wish to verify Conflict Catcher loaded.

If you hold down "Tab" at startup time, Conflict Catcher will pause after all the startup icons are displayed. When the "Tab" key is released, the startup process will continue.

- **Recognize Fonts Folder:** Requires System 7.1 or Later. When this option is enabled, Conflict Catcher will include the Fonts folder in its scan of the System Folder. They will be treated exactly like any other startup file. When turning this option on or off, you must close and open Conflict Catcher for the System Folder to be re-scanned.
