Adds a new dimension to desktop publishing. Turn ordinary display type into works of art. Bend, twist, distort, arch, stretch, flip, rotate; combine character and shadow styles. Enhance text with sunbursts and fades. Create custom backdrops for your designs with a click of the mouse. Choose automatic or manual kerning and leading, with variable spacing. TypeStyler can export designs to PageMaker, QuarkXPress or Adobe Illustrator; or you can import artwork from other graphics program to TypeStyler and add then styled text. Now you can achieve effects previously possible only with costly photo-typesetting, or using skilled graphic artists.
