

WINZIP

SHAREWARE

\$29.00

What is a "ZIPPED" File? A zipped file is one file that contains one or more files, which have all been compressed. Sound complicated? With **WinZip** its not!

While on the Internet you will certainly download something, be it a text file, a program, or a graphic. The vast majority of these files are "zipped". When you see a program with the .zip extension, just use **WinZip** to open it, and it will restore the program to its original uncompressed format.
