KAI'S POWER TOOLS 2.0 Sample Filters Set - INSTALLATION

KPT is not a standalone application, it is a plug-in filter. It will not run by itself! You must run it from within a plug-in 'host' application such as Adobe Photoshop (2.5 or later) or Fractal Design Painter (2.0 or later).

In the "KPT" folder of this CD, you will find a "Filters" folder containing sample versions of the following standalone filters: 3D Stereo Noise, Diffuse More, Find Edges Soft, Pixelwind, and Sharpen Intensity.

TO INSTALL:

Drag the contents of the appropriate filters folder (the folder that reads "For PPC Macs Only" if you are a Power Macintosh user, or the folder that reads "For 68k Macs Only" if you are using a 68K based Macintosh), into your Adobe Photoshop™ Plug-ins folder. That's it! The filters will appear in the various submenus under Photoshop's "Filter" menu.

TROUBLESHOOTING

KPT menu and filters do not appear on menu:
• Incompatible INITs can cause weird behavior and cause the system to hang. If you think you may have a compatibility problem and are using System 7, restart your Macintosh while holding down the shift key. This will turn off all system extensions.   If you are using System 6, remove all INITs from your system folder and restart. If the problem disappears, then there are incompatible INITs. The inits can be removed (if you haven't already done so) from the system folder and added back one by one to find the culprit.

• If you are runing AutoDoubler or a similar compression program, be sure that the KPT filters and KPT Support Files remained uncompressed. If the Support Files become compressed, the filters may not be able to locate them or be able to use them. Consult the compression program's manual on how prevent a folder from being compressed.
