The Martial Arts Explorer

Copyright 1994 Virtual Arts Ltd.

WELCOME
Thank you for purchasing "The Martial Arts Explorer", the first of the Martial Arts Collection.

SYSTEM REQUIREMENTS
IBM PC or Compatible Machine with 386DX processor.
4MB of RAM, 8MB recommended
Double-speed CD-Rom drive
Super VGA, 640 x 480 , 256 colors Graphics Card
Windows 3.1

BEFORE STARTING UP
If your computer has 4MB of RAM make sure that "The Martial Arts Explorer" will have as much RAM memory available as possible.
Edit AUTOEXEC.BAT on the root directory of you hard disk, and comment all lines that load drivers and programs that are not strictly necessary for the system to run (i.e. network card drivers etc.). To comment a line in AUTOEXEC.BAT , write "REM" at the beginning of the line. Re-start the computer after any change in AUTOEXEC.BAT file.

You should also have the VIRTUAL MEMORY enabled for Windows 3.1. To operate this feature double click on the "386 Enhanced" icon in the Control Panel, and select "Virtual Memory" button. Make sure that the virtual memory size is at least 4Mbytes.

If you experience memory related problems, delete the explorer.ini file.

COLOR DEPTH CONSIDERATIONS
The Martial Arts Explorer works best at 256 colors setting, or at 32,768 (32K) colors setting. If your computer is at 65,536 (64K) colors setting, or higher, you may experience jerky video playback. If so please set your computer to 256 colors setting or to 32,768 (32K) colors setting. To check your current color depth setting use the control panel application provided with your video driver or use the Windows Setup program in the Main program group.
