View Mailer
Quick Install

Quick Start for NOSVIEW (Stand-alone version)

The following are the commands required to get View running quickly.

C> MD \SPOOL
C> MD \SPOOL\MAIL
C> MD \SPOOL\MQUEUE

C> COPY A:CONFIGR.EXE \SPOOL
C> COPY A:ADD-ON.EXE \SPOOL
C> COPY A:QM.EXE \SPOOL
C> COPY A:MAILBOOK.EXE \SPOOL
C> COPY A:VIEW.HLP \SPOOL

VIEW.EXE can be located anywhere as long as you have a PATH statement for DOS to find it.
If you have been using another mailer with NOS, then the SPOOL sub-directories may
already exist. When you run View for the first time, you should select f5 and fill in the config
page.

For novell users, the files should be in the SYS:VIEW directory, and NOT the \SPOOL
directory. Novell users must install the 'Network Postman' software. Read the LAN_VIEW
document.
