Story

You are a test pilot flying the RaptorX prototype for the Terran fleet. The RaptorX is a state-of-the-art design, which all enemies fear. The enemy Xidus Armada recently discovered the bay where the Raptor's were stored, and quickly launched a surprise attack upon your fleet. All the Raptor's were destroyed, except for a few pilots testing the newly designed RaptorX prototype at the time of the attack. It is up to you to save the rest of the Terran fleet. It won't be easy though- the Xidus Armada has built a Demon Star Base ship. Do you have what it takes to seek out and destroy the Demon Star, and conquer the Armada fleet?

How to Play

Key to the game is to work your way through the levels, while destroying the Boss at the end of each. Pick up bonuses along the way to increase your firepower to help you advance through the levels, while scoring as many points as possible. After upgrading your shot, pick up the same color to increase the power and ray of beam of that particular shot. If you accidentally pick up another color after multiple upgrades, it will downgrade your shot to the weakest shot of that color. Your destiny is to destroy the Demonstar, **at all costs!**
