

Adding a Hyperlink to Text Turns it Blue and Underlines it

The information in this article applies to:

- Microsoft Graphics Studio Home Publishing 99

SYMPTOMS

=====

When you choose to add a hyperlink to text in Home Publishing, Home Publishing turns the text blue and underlines it.

You may be able to change the color by highlighting it and selecting a text color; however, you cannot remove the underlining.

When you view your finished product in a Web browser and you click on the hyperlink, the browser may highlight the text or object with a thin border around it.
