

No Option Available to Preview Fonts in Font List

The information in this article applies to:

- Microsoft Graphics Studio Home Publishing 99

SUMMARY

=====

In E-mail Projects, there is no option to preview fonts in the Font list, giving you no way to see a preview of the font before you select it.

This is due to the way Microsoft Internet Explorer works with Home Publishing E-mail Projects to handle the multimedia graphics and HTML files.

You can view fonts in Paper Projects, in the Windows font folder, or in another application that displays font previews.
