Version 1.5 (08/12/00)
New Features
•The 30 day trial period has been reset for everyone
•Preferences option to view picture files as you browse
•New feature to easily change multiple file's creator/type, visibility, and lock status
•Contextual menu to stuff and unstuff files
•Preferences option to hide/show the links bar on open
•Disclosure Triangle in Explorer window that allows you to hide/show the links bar
•When the find field is in focus you can use the return key to initiate the search instead of clicking the find button
•When the path field is in focus you can use the return key to open the file/folder that the path field is pointing too.
•If you enter a url in the pathfield and press the open button (or hit return)   your default browser will open and will go to the specified web site
•The new iMac colours have been added to the colour preferences
•A Beginners Mode button has been added to the preferences window

Improvements
•Macintosh Explorer is now much smarter
•Delete unused files feature is now much more accurate when Finding unused files
•The back up feature now has an option to stuff the folder that the files are moved too (This requires the stuffit engine to be installed)
•Major Speed Improvements
•Resizing the file lists in the Explorer window is no longer done live.
•Updated Manual and read me

Bug Fixes
•Fixed a bug with the Open With Dialog
•If single click browsing is enabled double clicking now works properly
•If a file is under 1K the size in bytes will be shown
•Many Bug Fixes
