Volume List
The Volume List shows all currently mounted volumes.   The volumes selected in this list will be examined when the Diagnose, Repair, or Snapshot buttons are clicked.

Click on a volume in the list to change its selection state.   If the list is active, you can use the Select All menu item from the Edit menu (âŒ˜A) to select all volumes in the list.   Make the list active by clicking in it or by using the tab key.   The list will have a dark border around it when it is active.
