## Microsoft Project 3.0

### Business Project Planning System

Take control of your project tasks and resources, from the simplest to the most advanced, with the world's best selling project management program. Microsoft Project gives you popular project management tools in the form of graphical screen displays called views. By using the views to define your project tasks and their relationships, you can plan your project to reflect "real world" situations. Flexible views make it easy to enter, work with, and display information at any level -- all the detail, just the big picture, or anything in between. You can even define your own buttons, setting up a system that works the way you do. Manage wisely and communicate effectively using Microsoft Project.

### Easy To Use

Click the toolbar to perform your most common tasks instantly. Whether you are creating a new plan or balancing your team's workload, Planning Wizards guide you to the tools you need to get your work done.

### Professional-Quality Reporting

Create great looking reports with charts, graphs, and your choice of fonts, sizes, and colors to communicate clearly. Show exactly the information you need to show in customizable Gantt and PERTcharts.

#### Minimum System Requirements:

**CPU:** 80286 or higher
