Microsoft Access 1.1

Relational Database Management System for Windows

The visual world of the Microsoft Access database management system makes it easy to use powerful features.   It lets you work with data in virtually any database format, and provides extraordinary help in learning and use.   Now you can work with data regardless of database or format architecture.   This means you don't have to give up your existing database applications in order to use Access.   It's the database that's hardworking without the hard work.

Enjoy Easy Access To Powerful Features

Graphical query by example enables you to create even the most complex queries visually.   And visual form-generation tools let you choose fields from a list and then drag-and-drop them into your form.   The banded, two-pass report writer allows you to create richly formatted, presentation-quality reports without writing code.

Be More Productive Immediately

FormWizards and *ReportWizards* ask you questions about format, content, and style, and then automatically create your form or report.   It's like getting a database expert right in the box! *Cue Cards* provide step-by-step help as you work with your own data.

Use a Powerful, Integrated Development Environment

Access Basic is a fully extensible database programming language that provides the tools you need to write complex database applications.   A full set of debugging tools let you set breakpoints, single-step through procedures and user-defined functions, and examine variables with the debugging window.

Minimum System Requirements:
CPU: 80386SX or higher
RAM: 4 MB; 6 MB recommended
Hard disk space: 8 MB; 14 MB recommended
Graphics card/monitor: EGA or higher
Mouse: Required
Operating system: Windows 3.0
Other: n/a
