

From Microsoft . . .

Microsoft Open EIS Pak 1.0

A New Generation of Executive Information Systems

Quickly and easily build custom EIS applications based on the most powerful mainstream graphical applications. Microsoft Open EIS Pak lets you reach more users while giving you the immediate power to analyze and understand data, by including eight of the most effective Microsoft applications: Excel, Word, Project, Access, PowerPoint, Mail, Visual Basic, and SQL Server. Create custom systems and deliver corporate data to the desktop, and at the same time find better ways to bring vital data to the *entire* business.

Developers Do More In Less Time

Put your business on the road to success with Microsoft Open EIS Pak. Because of the capabilities of Open EIS's applications you can bring one of today's most valuable assets to your organization; Time! Quickly create a personalized EIS that offers the most advanced tools for handling everything from numbers and text to charts and graphs.

Do More with Superior Data Access and Live Links

Easily move data between Microsoft applications, such as turning numbers into graphs, adding charts to text, creating entire presentations, and combining issues and results through Microsoft Mail. Access corporate data more efficiently and effectively with the power of dynamic data exchange (DDE), object linking and embedding (OLE), Microsoft Access, the query facilities in Microsoft Excel, and the imminent open database connectivity (ODBC).

Powerful Development Tools

Utilize the built-in functionality of the Microsoft applications or easily customize, combine, and extend the functionality. You can also create new user interfaces by using powerful tools such as macros in Microsoft Excel and Word Basic, visual programming with Visual Basic, and coding with Microsoft C/C++. Reduce training and support within your organization by offering both the users and developers easy, intuitive ways to work and learn.

Reach More People with New Technology

Improvements, innovations, and new technology are immediately available to EIS users and developers due to Microsoft's continuous challenge to offer the best products in the business. Make information more broadly available to your managers and analysts through powerful data access tools. Now key members of your organization can get the information, analyses, and answers they need from both corporate and each other!
