From PowerBASIC, Inc. . . .

PowerBASIC 3.0

We Put the Power in BASIC!

PC Magazine awarded Editor's Choice to PowerBASIC as the best DOS BASIC for powerful features like instant TSRs, a built-in assembler, user-defined TYPES and UNIONS, currency variables with selectable precision, unlimited string space, and array sort/scan/insert/delete.   You can create a pop-up TSR with just five lines of source code!   It's almost 100% compatible with Quick Basic, making it the upgrade choice of BASIC programmers.

PowerBASIC also includes tons of example code -- a MAKE utility, a B-TREE ISAM, a multi-windowed text editor, and a GUI toolbox.   The friendly environment, context-sensitive on-line help system, and the extensive documentation make learning PowerBASIC a snap.

Third Party Tools and Support

The most powerful and respected tool kits are available to PowerBASIC users.   Libraries from companies like Crescent, Elltech, Genus, Ansoft, and others make PowerBASIC the most comprehensive BASIC compiler available today.   Technical support is available from our engineering staff by telephone, mail, fax, BBS, or our PCVENB support forum on CompuServe.

Minimum System Requirements:
CPU: 8088 or higher
RAM: 640k
Hard disk space: 2 MB
Graphics card/monitor: any
Mouse: any
Operating system: DOS 2.0 or higher
Other: n/a
