## **Example 1: Product mix problem with diminishing profit margin.**

Your company manufactures TVs, stereos and speakers, using a common parts invento y of power supplies, speaker cones, etc. Parts are in limited supply and you must determine the most profitable mix of products to build. But your profit per unit built decreases with volume because extra price incentives are needed to load the distribution channel.

|              |           | _          | TV set  | Stereo | Speaker |
|--------------|-----------|------------|---------|--------|---------|
|              | Number    | to Build-> | 100     | 100    | 100     |
| Part Name    | Inventory | No. Used   |         |        |         |
