## 3-D Keyboard 2.32

# Make Your Windows Applications Multilingual

Now you can remap your keyboard to add foreign language characters onto your keys without sacrificing any of your English characters. A great tool for students, teachers and professionals, it lets you type a language that you are learning or already know. It won't teach you a language or translate for you, but it is ideal for anyone who needs to type in one or more West European languages within one document. No longer will you have to waste time in setting up macros, looking up character codes, or using your Windows Control Panel to access foreign characters and special symbols. 3-D Keyboard is the ultimate Windows keyboard customizer.

## Not Just for Foreign Languages

3-D Keyboard lets you type special symbols such as: international currency symbols, fractions, math symbols, bullets, the section symbol, the copyright sign, the registered trademark sign, and many others.

## Start Typing Instantly

The following country specific keyboard layouts are available by choosing from a menu or pressing a hot key:

US & Enhanced US

France

Germany

Italy
