

From Relay Technology . . .

Relay/PC Gold for Windows 6.0

The Complete Solution for Corporate Communications

Relay/PC Gold 6.0 is the most complete PC connectivity software you can use to meet your organization's communications needs. Whatever your requirements -- connecting to a mainframe from local or remote locations, or connecting to other PCs or information services -- Relay/PC Gold gives you the data you need quickly and easily. You can transfer a file or just a portion of a file at the record or field level. And its easy-to-use Windows interface provides all the powerful features your users know -- Help, Cut/Copy/Paste Clipboard, Hotspots, and more.

Transfer Files

When communicating with mainframes running Relay software, Relay/PC Gold can transfer files -- and data -- over virtually any connection. And it supports all popular file transfer protocols: XMODEM, YMODEM, ZMODEM, Kermit, and more!

Turns PCs Into 3270 Terminals

With Relay/3270 software on your mainframe, Relay/PC Gold turns your PCs into 3270 terminals without requiring any additional hardware such as boards or cables. This means your PCs can do 3270 emulation from virtually anywhere -- even from a laptop.

Automates and Simplifies

Relay/PC Gold's powerful scripting language lets you automate anything from simple tasks such as logon procedures to more sophisticated operations such as completely unattended data exchange between dozens of remote PCs and your mainframe. And Relay/PC Gold can conduct up to 15 communications simultaneously.

Minimum System Requirements:

CPU: 80286 or higher

RAM: 2 MB

Hard disk space:

Graphics card/monitor:

Mouse:

Operating system: Windows 3.0
