

Microsoft Scenes Outer Space Collection 1.0 Voyage into the Final Frontier!

Explore the unknown and see our world in new ways. It will prove to be a thrilling, inspiring way to extend the life of your computer monitor. This screen saver will let you experience first hand close-up, full-color photos of the wonders of the universe while exploring the unknown!

Choose Your Mission

Imagine the Orion Nebula -- so far away that light takes 18 centuries to make the trip. Or the rocky landscape of Mars, as you view this terrain from the Viking 2. You can explore and experience these and more than 40 full-color images from the solar system and beyond, accompanied with fact-filled descriptions created by Damond Benningfield, producer of the award-winning *Star Date*, heard by more than 10 million people worldwide.

Voyage To These Mysterious Places In the Universe:

Candor Chasma on Mars

Horsehead Nebula

Neptune

Saturn's Rings

The Great Red Spot of Jupiter

Triton

Venus

And a great deal more, all while saving your screen!
