Long File Names 1.02

255-Character File Names for Windows

Do you sometimes have difficulty finding the file you want? Short, 8-character file names cannot convey any real meaning about file contents. You remember the file all right, you just can't remember the name that will let you retrieve it. VIEW Software has innovated simple and effective solution, Long File Names for Windows. Now, you can use file names up to 255 characters long. You can give your files clear, meaningful names that describe what they contain. With 255 characters, you can even write a short synopsis. With Long File Names, you use the familiar **File-Open** and **File-Save As** commands. There is nothing new to learn. You create a long file name, the product automatically creates a standard 8-character file name (which you can change). To the computer and operating system, the file is stored normally using the 8-character name. There is never any possibility of losing a file. Quite simply, Long File Names eliminates a major source of computer frustration. It may be the only document management system you will ever need.

With Long File Names, never again waste valuable time trying to remember the name of the file you want

Name files using up to 255 characters

Use meaningful names, even write a description of the file.

Nothing new to learn

Long File Names uses standard Windows **File-Open** and **File-Save As** commands. The list boxes are deeper and wider and scroll to show all information.

100% safe

Files are saved by operating system as normal, 8-character name files.

Works with Microsoft Word, Excel, PowerPoint, Mail, Access, Publisher, and Visual Basic

Long File Names also supports products from WordPerfect, Lotus, Corel, Adobe, Xerox, Borland, Visio and other popular Windows applications.
