Golden RETRIEVER 2.0 for Windows Windows Users' Best Friend

Golden RETRIEVER is the next logical step to file handling in Windows. It emulates a filing cabinet in which you store paper documents, complete with drawers and file folders, to make your Windows desktop computing easier and more intuitive. Golden RETRIEVER electronically allows you to maintain the files generated by any application, whether it be a word processor, a spreadsheet, a desktop publisher or database--all in one place, by project or subject.

Filenames are not constrained by the 8-character DOS limit. Instead, Golden RETRIEVER allows for the use of filenames up to 256 characters long, complete with full punctuation. The cryptic "993psale.xls" becomes the far-more-easily understood "Projected Sales, September 1993."

Critics Say . . .

"If your Windows desktop is as cluttered as your real desktop, it is time to say 'Here boy' to Golden RETRIEVER".

The New York Times

"This is one utility I can't do without."

Mel Goldstein, *Nibbles & Bytes*

Don Crab of *Chicago Sun Times* gives Golden RETRIEVER a "9.5 out of 10."

Minimum System Requirements

CPU: n/a

RAM: 2MB

Hard disk space: 1 MB

Graphics card/monitor: n/a

Mouse: Required
