Print command (File menu)

Use this command to print a document. This command presents a <u>Print dialog box</u>, where you may specify the range of pages to be printed, the number of copies, the destination printer, and other printer setup options.

Shortcuts

Тос	olbar:	9
Keys:	CTRL-	⊦P

Print dialog box

The following options allow you to specify how the document should be printed:

Printer

This is the active printer and printer connection. Choose the Setup option to change the printer and printer connection.

Setup

Displays a <u>Print Setup dialog box</u>, so you can select a printer and printer connection.

Print Range

Specify the pages you want to print:

All Prints the entire document.

Selectio Prints the currently selected text.

Pages Prints the range of pages you specify in the From and To boxes.

Copies

Specify the number of copies you want to print for the above page range.

Collate Copies

Prints copies in page number order, instead of separated multiple copies of each page.

Print Quality

Select the quality of the printing. Generally, lower quality printing takes less time to produce.

Print Progress Dialog

The Printing dialog box is shown during the time that <<YourApp>> is sending output to the printer. The page number indicates the progress of the printing.

To abort printing, choose Cancel.

Print Preview command (File menu)

Use this command to display the active document as it would appear when printed. When you choose this command, the main window will be replaced with a print preview window in which one or two pages will be displayed in their printed format. The <u>print preview toolbar</u> offers you options to view either one or two pages at a time; move back and forth through the document; zoom in and out of pages; and initiate a print job.

Print Preview toolbar

The print preview toolbar offers you the following options:

Print

Bring up the print dialog box, to start a print job.

Next Page

Preview the next printed page.

Prev Page

Preview the previous printed page.

One Page / Two Page

Preview one or two printed pages at a time.

Zoom In

Take a closer look at the printed page.

Zoom Out

Take a larger look at the printed page.

Close

Return from print preview to the editing window.

Print Setup command (File menu)

Use this command to select a printer and a printer connection. This command presents a <u>Print Setup dialog box</u>, where you specify the printer and its connection.

Print Setup dialog box

The following options allow you to select the destination printer and its connection.

Printer

Select the printer you want to use. Choose the Default Printer; or choose the Specific Printer option and select one of the current installed printers shown in the box. You install printers and configure ports using the Windows Control Panel.

Orientation

Choose Portrait or Landscape.

Paper Size

Select the size of paper that the document is to be printed on.

Paper Source

Some printers offer multiple trays for different paper sources. Specify the tray here.

Options

Displays a dialog box where you can make additional choices about printing, specific to the type of printer you have selected.

Network...

Choose this button to connect to a network location, assigning it a new drive letter.

Page Setup command (File menu)

How to contact	US:
By E-mail:	mguesdo@worldnet.fr (Prefered)
	mguesdon@kagi.com
	73373.1446@compuserve.com
WWW:	http://www.worldnet.fr/~mguesdo/SBDev_WLT.html
By Fax:	(33-1) 42.41.27.27
By Snail-mail:	SOFTWARE BUILDERS
-	89, Av. SECRETAN
	75019 PARIS
	France

Disclaimers:

Software Builders assumes no liability for damages, including, but not limited to, any lost profits, lost moneys, incidental or consequential damages arising out of the use or inability to use this program.

AppTranslator® is provided "AS IS". Software Builders disclaims all warranties, either expressed or implied, including, but not limited to, the warranties of merchantability and of fitness for any purpose.

In no event shall Software Builders's total liability to you for all damages, losses, and causes of action (whether in contract, tort, including negligence, or otherwise) exceed the amount paid for the AppTranslator® Software and its documentation.

Information in this document is subject to change without notice. Companies, names, and data used in examples herein are fictitious unless otherwise noted.

License and Legal Information:

. Windows is a registered trademark of Microsoft Corporation.

. The AppTranslator® Software for Windows was written by Manuel Guesdon from Software Builders. The AppTranslator® Software and documentation are Copyright 1995-1996 by SOFTWARE

SOFTWARE BUILDERS BUILDERS, with all rights reserved. You can't redistribuate it with your 'registration string' and you're not allowed to communicate you 'registration string' to a third party. Reception of 'registration string' is under your own responsability (but you can send me your PGP public Key when registering and I'll send your 'registration string' encrypted).

This software can't be used by laboratories in biology domain, nor by manufacturers or distributors of biology equipment.

Remerciements/Acknoledgments:

I thank Bruno d'Andrea from Executive Partners Software for his help in testing AppTranslator® and reviewing documentation. He makes really good products for Windows (including TimeWizard® 95). You can reach him at 100430.1650@compuserve.com.

Toute ma gratitude va de même aux personnes qui m'ont soutenues à coup de 'Eh alors, ton soft sur Internet, tu le met quand ?'; ce à quoi j'ai répondu, pendant plusieurs mois: 'bientôt, bientôt, j'ai quasiment fini: encore 2 ou 3 bugs à corriger...'

Important notes, limitations...

Demo version generates 'DEMO VERSION !!!' translations when there are more than 2 items in a dialog box, in a menu or in a string table segment (this limitation will disappear when you enter the registration string)

String named items can't be imported (Only Numeric IDs can be imported)

Menu are imported by positions

AppTranslator® works only with 16 Bits .RES Files (32 Bits version available soon) Next versions

Dialog Box Items must have a unique Id in the parent dialog box

Partial <u>VBX Support</u>

Bug Report

	MEMO
	_
L	\sim

If you experiment something you think might be a bug in this software, please report it by sending a message to mguesdo@world-net.sct.fr

(Best way is doing File\Create New Bug Report, add your comments and do File\Send As Mail)

Describe what you did, what happened, which version of the software you have, any error messages the software gave (the numbers in begining of the messages are especially important), which operating system you're using, and anything else you think might be relevant.

Please leave <u>File\Setup\general\Log checked</u>, so we'll have more informations about your problem.

Next Versions...

Will work on 16 & 32 Bits Will support Fonts informations

What Is AppTranslator® For ?

AppTranslator® helps you to translate your Windows Application into foreign languages. All you have to do is importing your application native language .RES file, translate items (menus, strings, dialog boxes and dialog controls) and ask AppTranslator® to generate a new .RES file.

See Main Steps

Main Steps

- 1) Create a new document.
- 2) Enter your native and foreign languages in the '<u>Languages</u>' item from 'Description' menu. (Enter Native Language First)

3) Import your Application's Native Language .RES file with <u>Actions\Add/Merge From</u> <u>Base .RES...</u>

- 4) Display the Hierachical view with View/Hierarchical View
- 5) Translate items
- 6) Export your translation into a new .RES with Actions\Generate translated .RES...
- 7) Link this new .RES with you project (or within a DLL)

VBX Support

The ability to use VBX controls depends on the control properties organisation (i.e. can all the properties be described before caption)

To support VBX, you have to fill a section manually in the VBX Description file path for each VBX you use.

If you use AppStudio, Best way of doing this is to copy AppStudio.Ini VBX Section and add Lines PropSize... for each properties.

Example:

[VBX:SPIN.VBX;SpinBu	
PropSize1=S	;CtlName
PropSize2=2	;Index
PropSize3=N	;Left
PropSize7=1	;Enabled
PropSize8=1	;Visible
PropSize10=2	;hWnd
PropSize13=1	;Tag
PropSize14=4	;BackColor
PropSize15=4	;ForeColor
PropSize17=4	;LightColor
PropSize18=4	;ShadeColor
PropSize20=4	;BorderColor
PropSize23=4	;ShadowForeColor
PropSize24=4	ShadowBackColor
PropSize26=4	;SpinForeColor
PropSize27=4	;SpinBackColor

Codes signification:

S	means property is a string (control name)
1,2,3,4	is the size used to save the property (4 for color,2 for index, HWnd,1 for flags)
Ν	means $AppTranslator^{\mathbb{R}}$ won't load this property nor the ones following (used for

Left...)

A sample file is included in this package: vbxes.ini

How to use a dll for res ?

if

}

You can use ResDII project wich is included in this package: just build it and, after, link your generated .res file to it.

In your application, you have to write something like that:

```
Try to load the library
11
HINSTANCE
               hLangDII HInstance=LoadLibrary(szDLLPathName);
        Verify it's OK
\parallel
ASSERT(((UINT) hLangDII HInstance)>=32);
if
        (((UINT) hLangDII_HInstance)<32)
                                               //
                                                       Error
{
        hLangDII HInstance=0;
}
else
{
        //
               If you want VBX support:
               Call the RegisterVBX function of the DLL
        ||
        typedef BOOL (__far *
TlpfnRegisterVBX
                                  TlpfnRegisterVBX)(HINSTANCE);
                               lpfnRegisterVBX=NULL;
        FARPROC
                       IpfnRegisterVBX Temp;
        lpfnRegisterVBX Temp=GetProcAddress(hLangDII HInstance, "RegisterVBX");
        lpfnRegisterVBX=(TlpfnRegisterVBX)lpfnRegisterVBX_Temp;
        BOOL fOk=(lpfnRegisterVBX!=NULL);
                (fOk)
        if
               fOk=(*lpfnRegisterVBX)(AfxGetInstanceHandle());
                               Problem
        if
               (!fOk) //
        {
                FreeLibrary(m_hLangDII_HInstance);
                                                       //
                                                               Unload Library
               hLangDII HInstance=0;
        };
               }
                       End of VBX Support Part
        \parallel
};
(hLangDII_HInstance) //
                               OK
ł
        \parallel
               new Ressource hInstance is hLangDII HInstance
        AfxSetResourceHandle(m hLangDll HInstance);
        //
               Problem
else
{
//
        Ressource hInstance is App Instance
        AfxSetResourceHandle(AfxGetInstanceHandle());
};
```

How to Register AppTranslator®?

Important: by registering, you accept all licence terms (see License and Legal Information).

Registration methods:

. CompuServe Registration:

To have the registration fee added to your CompuServe bill use the CompuServe command GO SWREG and follow the menus.

AppTranslator® 's registration ID is **11578**.

. Other payment methods (credit card, check...): Run register.exe and follow recommendations.

When you register: you will be sent a registration key that removes translated items number limitations. You will also be informed of newer versions as well as our upcoming exciting products.

Comments are welcome. Thank you for your support.

Order Form

To print this form, click on Print Topic in the File pull-down menu.

Fill and send this form to us by mail (see our address in this Help file <u>Contents</u>) with your payment:
