3D Darts Demo
by Fuzzy Logic Enterprises (Oasis Project)

Thank you for trying "3D Darts". This demo game uses DirectX technology
to bring you an entertaining dart game.

How to Play
After the opening screens, select one or two player mode by moving the dart
shaped cursor over the appropriate bulls-eye and click the left mouse button.
To throw a dart, position the hand where-ever you wish and click the left
mouse button. This will bring up the "targeting" display. To throw straight,
click the left mouse button again when the moving dart is directly over the
bulls-eye. Note: If the moving dart icon is to the left of the bulls-eye, you
will throw to the left from where the hand is positioned over the main dartboard.
This demo limits you to ten darts for each player.

Minimum System Requirements:
Windows95 or NT 4.0
