=====

Description

PuzzLex is a program designed to solve a variety of word problems, and was initially designed to find solutions to those last few crossword clues that you cannot solve.

It works by taking an incomplete word and finding all the possible words that are valid matches to the supplied pattern. At its simplest level you enter the word in the FIND FIELD: representing any unknown letters with a ?. When you press the START button PuzzLex will find the matches.

From this simple beginning PuzzLex has developed to solve a wide range of problems including: Incomplete Words, Anagrams, Multiple Word Anagrams and Countdown. Each of these types of problems are described in the help file.

PuzzLex is supplied with a 50,000 word lexicon (increased to 200,000 words in the registered version). You can add your own words to PuzzLex dictionaries and create your own personal or specialised dictionaries.

I hope that you enjoy using PuzzLex and if you have any comments positive or negative then please drop me a line.
