The Tag Manager shows a listing of all tagged items found in the Main Display Window; tagged items appear in red.   This window looks identical to the Main Display Window with the exception that the fields are grayed out and can't be used to input information. The purpose of the Tag Manager is to create a temporary file of listings that you will want to print, export, or dial once you have completed all of the searches.

When you tag a listing by using the Tag command from the Edit menu, (or by double-clicking highlighted listings), the listing will automatically be stored in the Tag Manager. Tagged listings will remain in the Tag Manager until you untag them. Clearing listings from your search screen will not affect tagged listings in the Tag Manager. You can create any size file with any combination of listings, then print or download them all at once. Once you exit ProPhone for Macintosh however, the listings will not be saved in the Tag Manager.
