

Revision Date: August 30, 2001

Typical 1 T-wall Non-Verizon Store Layout (Strip and Mall Stores)

These sections are not represented in this drawing due to lack of floor space.

Science Kits were removed from the sales floor since the last revision due to lack of space.

This is a new 1' section that must be added to all layouts. It can be located either beside

PowerZone or next to the 1' section of Tester Parts. Networking Accessories is now a 4' section due to new product lines being carried.

Books are no longer a section by themselves. They have been divided up and placed in many sections so this block should no longer be drawn.

Non-Verizon Stores do not get a PrePaid Services 2' section at this time

because those products are part of their Wireless Services block.

The Caller ID Power Tower should be labeled as such, without the name SONY attached. We no longer merchandise any SONY product in this location

The Headphone Power Tower no longer has remotes on it so it should be labeled as simply Headphone Power Tower
