

New

Choose New (or press Ctrl + Shift + N), to open a new session window.

After you choose New, a dialog box appears where you choose whether you want a terminal or printer session.

You can customize the features (window size, screen colors, keyboard mapping) of this session because these changes are saved when you save the session profile.

Terminal Session

Choose Terminal Session when you want to start a terminal session. A terminal session lets you connect to a host, for example to transfer files. You can have both terminal and printer sessions open together.

Printer Session

Choose Printer Session to start a new Printer session profile. A printer session closely emulates IBM's 3287 printer. You can have both terminal and printer sessions open together.

Open

Choose Open (or press Ctrl + Shift + O) to use a previously saved session profile and display it in the session window.

After you choose Open, a dialog box appears with a list of profiles where you can choose the profile you want to open.

Open Profile Name

This element of the dialog box, is called a text box. It identifies the opened profile.

To open a profile from another directory, type the drive, directory and profile name to the left of the .DSP (terminal session) or .PRT (printer session) extension in the text box. Profiles from another directory can also be opened by double-clicking on the directory in the Path Control Line above the Profiles in Drive list box.

Profiles in Drive

This list box identifies the profiles, both .DSP and .PRT, in the current directory (the directory is shown in the Path Control line above the list box). It also lists all the drives or subdirectories (set off with square brackets).

To open a profile, select the profile name by scrolling and clicking (with a mouse) or using the direction keys (on the keyboard). Then choose the OK button.

To open a profile from another directory, select the drive or directory in the list box, then choose the OK button.

Path Control Line

Profiles from another directory can also be opened by double-clicking on the directory in the Path Control line above the list box. When the new profiles appear in the list box, select the desired profile and choose the OK button.

Save

Choose Save from the File menu (or press Ctrl + Shift + S) to save changes made to an existing profile or to save a newly created profile.

When saving a new (untitled) profile, Rumba takes you to the Save As dialog box where you can give it a name. If you accidentally overwrite the .DSP or .PRT extension when naming the profile, Rumba adds the extension again when it saves the profile.

Save As

Choose Save As from the File menu to save a newly created profile or to save an existing profile under a different name. After you choose Save As, a dialog box appears where you can type the name for the file. If you accidentally overwrite the .DSP or .PRT extension when naming the profile, Rumba adds the extension again when it saves the profile.

Save Profile As

This list box identifies the name of the open session profile and lets you change the name if desired.

To change the profile name, type the profile name to the left of the .DSP or PRT extension , then choose OK. If you accidentally overwrite the .DSP or .PRT extension when naming the profile, Rumba adds the extension again when it saves the profile.

Exit

Choose Exit from the File menu (or press Ctrl + Shift + X) to exit an active session window.

If there are unsaved changes in the session profile , a dialog box appears asking whether to save the changes before closing the window. If the profile is a new (untitled) profile, you will be taken to the Save As dialog box.
