

Keywords: HANDSHAKE CAPTURE PARSE CELL LET RECALC INDICATE BRANCH
GRAPHICS

This worksheet (binary file) is a new version of the SCL program STKGRP.WRK which includes a new prompt for the ticker to be captured graphed. This program is a good example of a practical use for self-modifying code and the use of the {LET} keyword to build other keyword strings during execution. To use, get on-line to CIS, retrieve the file, and watch the automatic execution.
