

Problem Some string arithmetic formulas that take the current date, a vendor code, and an order#, and create a day coded string. EX. The date 02/19/85, the vendor code H, and the Order # 01, are combined to produce 5H021901.

Block Diagram

Tips

Application uses formulas such as:

```
@MID(@STRING(@YEAR(@TODAY)0),1,1)
```

which can be found in cell B2, to do string arithmetic.
