

Problem Example of practical use of Symphony macros to synchronize window movement w/ 2 windows on screen as in 1-2-3.

Block Diagram

Tips

Heart of macro routines are the formulas in the following cells:

D9 - self modifying string macro used to calculate cell address in other window to move pointer to.

G4 - @string(@cell("ROW",A),)

D12 - @char(@cellpointer("COL")+64)
