Tips   (See the 5102 doc file for "Problem" and "Block Diagram" info)

This application is loaded with technical 1-2-3 wizardry.
The following is a partial listing of some of things you can
learn from studying it.

Error checking section beginning at cell A1276. Uses various
numbers and relationships among the different tax forms for
consistancy.

Makes extensive use of 1-2-3's @functions throughout application,
including: @MAX, @MIN, @VLOOKUP, @CHOOSE, @ROUND, @INIT, @ISERR,
@SUM, and @IF. Also contains many compound formulas making use
of the logical operands #AND#, and #OR#. These formulas can be
studied by formatting cells "Text" with the command /RFT< >
and then widening the columns.

Application is organized to minimize memory requirements using
only columns A - G.

Macro tips include:
 - a self modifying GOTO macro for bouncing among the different
   forms. (A1336)
 - Printing macros that only print the forms you enter numbers
   on. (A1349)
 - Macro that sets things up to print IRS authorized forms.
   (F1345)
