Problem   Menu-driven application that uses macros to build amortization
          schedule based on user inputs. Contains Data Query macros
          for selectively viewing 12 period sections of schedule, and a
          Data Table 2 analysis section for doing monthly payment
          sensitivity analysis. Contains 4 online help screens.
          Handles one baloon payment.
