Release Notes for CFS Version 2.20

This release of CFS provides support for the complete function set of the product.

New additions in this release are:
Version 2.20
  1) support for image files added.   The IMG format is rendered by the
        View function.

Version 2.19
  1) DDE processing is provided.

Version 2.18
  1) Start up line arguments are more fully processes.   This includes the ability to add
        a file to an archive from a switch option.   Form:

        cfs.exe <archive> <option>

        <archive> -- full path and file name of the archive

        <option> -- one of the following valid options

              /ADD:<filename> -- the names file is added to the archive

        Example:
        CFS t.cfs /ADD:\letters\1-1.doc
              In this example the file 1-1.doc is added to the archive T.CFS.

  2) New message processing is supported.   This message processing allows other
        programs to send the /ADD file message to CFS.   The /ADD message supports
        naming the archive and file to be added.   Please contact customer support for
        additional information on programmer support and interface.

Version 2.17
  1) Drop & drag - From file manager files may be added by selecting a file and
        dragging it to the CFS application.
  2) Free form text files fill data fields - The following words are searched for and data
        is taken to the end of line to fill the field.
        To:
        From:
        Subject: or Subj:
  3) Mail message formats support for MHS.

CFS is provided as a *SHAREWARE* product.   We encourage you to make copies and
provide them to your friends and coworkers.   No modification of   the program or
documentation is allowed.
