Dear <**Name**>:

I am a very satisfied user of OS/2 2.x, and I believe it has an exciting future.
I would like to be sure that <**Name**> products work with OS/2. With few
exceptions DOS and Windows programs operate just fine if not better under
OS/2, although OS/2 does not allow programs that use certain
'undocumented' calls or the like to function properly.

Please test your products under OS/2, so that I can continue to patronize
<**Name**>.   If possible please state on the package that the product was
tested under OS/2.

I would be happy to participate in beta testing, and would gladly provide
additional information about my system if necessary.

Thank you,
