SNDCAPS : A Minor TPW program to display the capabilities of any sound boards or MIDI interfaces in WIndows 3.1.

Written because I had need of determining the capablilites of various boards during the course of multimedia project.

Nothing tricky or fancy about it, just a modeless dialog box main windows and a separate dialog box for MIDI information.

It was written using the Borland custom controls DLL 'BWCC.DLL', so it is included in the .ZIP file. If you have a later release, use that.

Enjoy!
