Installation

Make sure this is the only document window open. Then:
Double

This WinWord macro is free. Please read below to
find out about our other macro add-in applications.

Fileware™

Fileware™ is a suite of thirteen file maintenance, document management, and program launching utilities which integrate seamlessly into Microsoft Word for Windows 2.x. It provides the many commonly requested features that Microsoft "forgot" to include. After auto-installation to the "File" or "Tools" menu, the *Fileware*™ system is never more than a mouse click or keystroke away. Now you can ***do everything you need without ever leaving Word for Windows...***

- Forget File Manager. Make directories; delete, rename, copy or move files. Because it's integrated into Word, *Fileware*™ is more convenient and much safer.
- Forget Program Manager. Launch programs instantly with *Run Buttons*, a customizable toolbox of push buttons (or type a command on the convenient *Quick Run Line*).
- Forget eight character DOS file names. *Fast Files* keeps a customizable list of document *descriptions* close at hand. Just point and click to open the files you want.
- Forget complicated directory paths. *Directory Jump* gives you push-button access to the directories you use the most. Just one click jumps you anywhere on your PC... or across your network.
- Abolish repetitive keystrokes. Close all open files at the same time with just one command. Options include *Close Without Saving* and *Prompt To Save*.
- Protect your confidential data. *Word Lock* provides password protection for the complete Word for Windows application (not just certain files).
- Edit document templates instantly, even if you don't know which directory they're in.
- Exit Windows with just one command when you're done working.

Fileware™ is a powerful yet inexpensive suite of utilities. It was chosen one of the "48 Best Add In" products by PC Magazine; PC Week says, "...adds a good selection of file and program management features that were left out of Word for Windows." In "Hacker's Guide to Word for Windows" (Addison Wesley) Woody Leonhard writes, "...the system that Microsoft forgot...makes WinWord stand on its ear."

Fileware™ 2.1 costs only **$39.95** per copy. Shareware file name: FW21.ZIP. (For the most recent version, search on FW*.ZIP)

DocuPower™

After you create Word for Windows documents, how do you find them? You know they're on your hard drive, or on the LAN file server... somewhere. So you keep clicking through the "File Open" list box. If only you could remember the file name (click, click), or the directory (click, click), — you might actually be able to get some work done!

Give long, descriptive names to your documents!

DocuPower™ breaks the eight character DOS file name barrier. It's a powerful document management tool that makes it easy to organize and quickly access your work. Best of all, *DocuPower*™ integrates seamlessly into WinWord. It's a quality macro system from Total System Solutions, the makers of the award winning *Fileware*™ macro collection.

Regardless of how you have your DOS directory structure organized (or disorganized), *DocuPower*™ keeps all the files you need always on hand, immediately available. If you create or use a document that you know you'll come back to again, just point and click to put it in a *DocuPower*™ "folder". Assign it a plain English description so there'll be no confusion. Keep related items grouped together in each folder. Every *DocuPower*™ item can be *opened*, *inserted* or *printed.*

- *Open* any file that you want to work on — just highlight its description. No need to search through directory after directory every time you need it.
- *Insert* the contents of one document into another. This can be a very powerful tool for *automated document assembly*. Keep standard document components in separate files. Group similar elements together in each folder. Access these items in any order to compose complex, individualized documents in minutes.
- *Print* a document without having to open it first — just by selecting its description.

  DocuPower™ crosses document management and office automation to turbo-charge Word for Windows. It's a valuable tool for word-smiths like attorneys, paralegals, secretaries, writers — anyone whose job includes word processing.

DocuPower™ 1.3 costs only **$24.95** per copy. Shareware file name: DPWR13.ZIP. (For the most recent version, search on DPWR*.ZIP)

Text Jumper™

Reading and editing documents at your PC on-line is annoying at best, and a time-waster at worst. When reading a **paper** document it's easy to flip through each page to quickly find the material you want. Reading the same document from a computer screen can be very frustrating... scrolling line after line, page after page.

The Windows "Help" system makes use of "jump text", special text that can jump you to any other topic, just by clicking on it (in the Mac world, this is called HyperText). Your word processor **should** be able to create documents which are as easy to use as the Windows "Help" system.

Text Jumper™ can make your on-line documents as user-friendly as the Windows "Help" system. It's a utility which enables you to easily create jump text in your Word for Windows documents. Now you can point and click to jump to any part of a document. Make your documents easier to understand and fun to read.

Text Jumper™ 1.1 costs only **$14.95** per copy. Shareware file name: JMPR11.ZIP. (For the most recent version, search on JMPR*.ZIP)

Downloading Current Versions

You can find the most recent versions of our software in many places. Three distribution sites are updated most frequently:

1) the Windows Advanced Forum on CompuServe

   (GO WINADV -- in the File Utilities Library)

2) The "Attention to Details" BBS: 909-681-6221

This is a free BBS. After signing on, download
TSS apps, as well as many other fine programs.

3) America Online (AOL): Do a file search - use the

keyword search feature to search on the word "WinWord".

Custom Applications

Word for Windows can do great things! Ask yourself what you really wish computers could do. Then call us.

Total System Solutions, Inc. creates customized Windows solutions for serious business users. We've developed turn-key Word for Windows applications to automate document processing for many major corporations. If you work with words or numbers in Windows, we can really help you.

For example, we recently developed a system to automate the generation of commercial leases for one of the largest commercial real estate management companies in the world. The time required for the creation of customized leases was cut from over 2 weeks to under 20 minutes per lease!

We can save your company time and money while improving and standardizing the quality of your output.

Call us today at 718-375-1261 for more information.
