

TBWin version 1.0a

(C)opyright 1992, Cairo Research Labs, 1113 29th Street, Columbus, Georgia, USA, 31904

What is TBWin?

TBwin is a Microsoft Windows-based GUI interface system for the ThunderByte Antiviral System. Currently, the only part of the TB system which is support by TBWin is TBSCAN. Hopefully, support for the remainder of the TB kit will be added in the near future.

Installation!

Installing TBWin is extremely simple at best. Just unarchive the distribution archive into its own directory. That's it. No voodoo here. The following files should be contained in the original distribution archive:

- TBWIN.EXE-The TBWin Executeable
- BWCC.DLL-Support Dynamic Link Library
- TBWIN.WRI-This documentation
- TBWIN.CTL-Sample setup file (created by TBWin)

Usage

Using TBWin is a cinch, so much, in fact, that I won't go into the minute details. The majority of knowledge needed to efficiently operate TBWin is contained in the ThunderByte documentation, which is distributed with the ThunderByte AntiViral kit. It is fairl straightforward to operate, and you shouldn't run into very many problems.

Support

Should you find yourself in a jam, help is available. You can reach me in the fidonet VIRUS and VIRUS_INFO echos, as well as the following address:

- Scott Burkett
- Cairo Research Labs
- 1113 29th Street
- Columbus, GA 31904

or at our support BBS at:

(706) 596-8126 9600v.32 1:3613/12@fidonet.org

Although TBWin is a freeware application, donations are not against my religion. :-)
