

The files here are either QuickTime or MPEG. If they are QuickTime, use Movie Player on the Macintosh; you will have to launch Movie Player, do a COMMAND-O[OPEN], and navigate to the movie of interest; this is because all resource forks have been removed for multiplatform compatibility. You will have to acquire a Movie player for QuickTime on other platforms. If they are MPEG (*.mpg), use Sparkle on the Macintosh; you will have to navigate as described above. You will have to acquire an MPEG player for use on other platforms.
