This document is
AntiViral Toolkit Pro for WinWord 6/7
ver 1.01

This document is FREEWARE.

This document is UserGuide and anti-virus utility at the same time. By reading this document you may install AntiViral Toolkit Pro for WinWord (AVPWW) on your computer.

Installation

To install AVPWW click twice here:

██████L

To uninstall AVPWW click twice here:

UNINSTALL

If you have AVPWW ver 1.0 already installed AVPWW 1.01 automatically uninstalls it.

Being installed AVPWW is active every time WinWord is active. After installation you need this file for uninstall AVPWW only.

Virus Detection

AVPWW installs itself into WinWord processor and prevents your system against the **WW6MACRO** virus.

While loading into WinWord AVPWW automatically checks WinWord, and disinfects by user's request the system files if they are already infected. If you only want to check WinWord for the virus presence you should not install AVPWW.

Being installed AVPWW automatically loads itself any time WinWord is started, and scans the WinWord documents for the virus. AVPWW scans only the documents are opening by File/Open menu or Open button.

Note: AVPWW does not scan the files which are opened by dragging into WinWord icon, or loaded from File Manager (double clicking on filename). But anyway AVPWW protects WinWord from infection if some of loaded in such way files are infected.

Note: AVPWW does not scan subdirectory tree to find the infected files. You should locate them with AVP for DOS by using <u>Redundant</u> mode, and then disinfect with AVPWW.

Virus Disinfection

To disinfect the file you should open infected file under active AVPWW, answer for request message, and then save file. <u>The file stays infected until you save it.</u>

Ver 1.01 Feature

AVPWW ver 1.01 supports most of national WinWord versions. The **WW6MACRO** virus has a bug and does not infect the national WinWord versions, but anyway you should check incoming files.

If you have installed AVPWW you may close that document and return to WinWord free of the computer viruses.

Good luck!
