13 Sep. 1995 release

This document is FREEWARE.

This document is UserGuide and anti-virus utility at the same time.
By reading this document you may install AntiViral Toolkit Pro for
Microsoft Word (AVPWW) on your computer.

Installation

To install AVPWW click twice here:

To uninstall AVPWW click twice here:

If you have older version AVPWW already installed AVPWW 1.02
automatically uninstalls it.

Being installed AVPWW is active every time Microsoft Word is
active. After installation you need this file for uninstall AVPWW
only.

AVPWW supports most of national Microsoft Word versions. Both known viruses have a bug and do not infect the national Microsoft Word versions, but anyway you should check incoming files.

Virus Detection

AVPWW installs itself into Microsoft Word processor and prevents your system against the **WinWord.Concept** and **WinWord.Nuclear** viruses.

While loading into Microsoft Word AVPWW automatically checks WinWord, and disinfects by user's request the system files if they are already infected. If you only want to check Microsoft Word for the virus presence you should not install AVPWW.

Being installed AVPWW automatically loads itself any time Microsoft Word is started, and scans the Microsoft Word documents for the virus. AVPWW scans only the documents are opening by File/Open menu or Open button.

Note: AVPWW does not scan the files which are opened by dragging into Microsoft Word icon, or loaded from File Manager (double clicking on filename). But anyway AVPWW protects Microsoft Word from infection if some of loaded in such way files are infected.

Note: AVPWW does not scan subdirectory tree to find the infected files. You should locate them with AVP for DOS by using Redundant mode, and then disinfect with AVPWW.

Note: AVPWW disable executing AutoMacros for preventing destroying your system. This may cause conflict with your document automation.

Note: Because WinWord.Nuclear virus has a DOS part you have to scan your DOS and Windows executable files with AVP for DOS

scanner using WINWORD.AVB anti-virus base. This base included in this package.

Virus Disinfection

To disinfect the file you should open infected file under active AVPWW, answer for request message, and then save file. The file stays infected until you save it.

Virus Description

To see known virus descriptions look for AVPWW102.TXT included in this package.

Last note:

If you have installed AVPWW you may close that document and returns to Microsoft Word free of the computer viruses.

Good luck!
