

# Read Me

## **Before Activating Still Lifes:**

Verify that there is 1MB of open area in your hard disk.

Verify that you are operating with 8MB of memory or more.

Verify that the display mode is set at 256 colors.

Using MEM command, verify that there is 5MB of available memory.

If Windows is set in a high-resolution mode (800x600 dots or 1024x768 dots) and if a 14" or 15" monitor is

used, the screen image will be very small. Still Lifes is designed for full-screen display in the 640x480-dot

mode, and in this mode may be used for full-screen display on a 17" or larger monitor.

For an improved screen image, use your monitor's color correcting function or a commercially available gamma correction tool to adjust color contrast.

## **Operating Guidelines for Still Lifes**

As this software is entirely mouse-operated, there is no need to use the keyboard.

During operation of the

software DO NOT use the keyboard.

When data is being read in or the screen image is in the process of changing, mouse commands will

momentarily be ignored. Please operate the mouse in a leisurely manner.

DO NOT do task switches while Still Lifes is in operation. It may lead to faulty operation.

## **Setup Program Information**

During the process of installing Still Lifes, the setup program makes the directory [still] in the designated drive and copies into it the necessary files. If you wish to return to the previous setting, delete the directory [still], and then delete the [Photopaedia] group in your program manager.
