## **File Menu**

This menu item displays the File pulldown menu which contains commands used to work with files and to print Amortization schedules.

Open

Save

Save As

Print

Print Setup

Export

Exit

## **Edit Menu**

This menu item displays the Edit pulldown menu which contains commands to edit variables and parameters that affect your mortgage.

Edit Variables

Parameters

## **View Menu**

This menu item displays the View pulldown menu which contains commands for displaying payment and amortization schedules.

Payment Table

Mortgage Table

Schedule

PC Status

Tool Bar

Status Bar

## **Accessories Menu**

This menu item displays the Accessories pulldown menu which contains commands for using accessories.

Calculator

AmortCalc

## Window Menu

This menu item displays the Window pulldown menu which contains commands for arranging the View windows on the main window.

Tile

Cascade

Arrange Icons

Close All

## **Open**

This pulldown item allows you to open data files saved previously with the "Save As" item.

## Save

This pulldown item allows you to save changed parameters and data to the current file. This file is either the initialization file or a file created with the "Save As" item.

**Initialization File**

When Amortizer is first loaded it reads an initialization file (AMORTW.INI) to load all the parameters and data with default data. You can save changes to this data in the initialization file or in separate data files.

## **Save As**

This pulldown item allows you to save parameters and data to a new file. This file can be reopened later to reuse data for specific amortizations.

## **Print**

This pulldown item allows you to print an Amortization schedule using the currently selected printer.

## **Print Setup**

This pulldown item allows you to select the Print Setup Dialog to select an active printer and set the parameters in the device driver.

## **Export**

This pulldown item allows you to export an amortization schedule file in a *quote and comma delimited* format that can be imported to LOTUS®, QUATTRO®, or EXCEL®.

## **Exit**

This pulldown item exits the program. You are prompted to save any changed data.

## **Edit Variables**

This pulldown item displays the Edit Dialog that allows you to enter your mortgage amount, interest rate, and the duration of your mortgage. If you want you can also enter a thirty(30) character description and names & addresses that will print on the amortization schedule. The fields are pre-loaded with default data.

## **Parameters**

This pulldown item displays the Parameters Dialog that allows selection and entry of data that affects the way an amortization schedule is created.

## **Payment Table**

This pulldown item displays a window with a table that compares payments on various principal amounts based on your selected principal in increments selected in the window and on your selected interest rate in .25% increments.

## **Mortgage Table**

This pulldown item displays a window with a chart that compares monthly payment and total amount paid for your mortgage for different durations.

## **Schedule**

This pulldown item displays a window with an amortization schedule based on selected parameters and the data entered in the Edit dialog. You can also review the affect of increasing payments or the balance of the loan at the end of any period.

## **PC Status**

This pulldown item displays a dialog with hardware, memory, and disk information. Certainly not necessary for an amortization, but good information to have.

This information should be valid. However, if you do not have an IBM or compatible clone some of the data could be erroneous.

## **Tool Bar**

This pulldown item allows you to display or hide the Tool Bar at the top of the window.

## **Status Bar**

This pulldown item allows you to display or hide the Status Bar at the bottom of the window.

## **Calculator**

This pulldown item starts the WINDOWS Calculator.

## **AmortCalc**

This pulldown item starts the AmortCalc program to solve for unknowns.

## **Tile**

This pulldown item arranges child windows in a tiled fashion across the screen.

## **Cascade**

This pulldown item arranges child windows so that each caption bar is visible.

## **Arrange Icons**

This pulldown item arranges icons of child windows along the bottom of the main window.

## **Close All**

This pulldown item closes all child windows that are currently active.

## **EDIT VARIABLES DIALOG**

This dialog allows the user to enter specific data for creating an amortization. Data elements available include:

Loan Amount  
Interest Rate  
Simple Interest  
Rule-of-78 Interest  
Number of Years  
Months  
Description  
For Name/address  
By Name/address

**Loan Amount**

Amount of principal borrowed. Amount must be between \$1,000.00 and \$999,999.99.

**Interest Rate**

The annual percentage rate(APR), expressed as a percent. Value must be between 1.00% and 20.00% in .25 increments.

**Number of Years**

Duration of loan, expressed in years. Value must be between 1 and 35.

**Months**

Months in addition to whole years. ex: 42 month loan is 3 years and 6 months. Value must be between 0 and 11.

**Description**

Optional description of the purpose of the loan. The description can be up to thirty(30) characters in length and will be printed on the amortization if selected in the Dialog.

**For Name/Address**

Optional set of three lines for entering the name and address of the person the amortization is for. Each line can be up to thirty(30) characters in length and will be printed on the amortization if selected in the Dialog.

**By Name/Address**

Optional set of three lines for entering the name and address of the person creating the amortization. Each line can be up to thirty(30) characters in length and will be printed on the amortization if selected in the Dialog.

## **OPEN DIALOG**

This dialog allows the user to open a previously saved data file by clicking on the file and selecting OK.

## **SAVE AS DIALOG**

This dialog allows the user to save data and parameters to be used again to rebuild an amortization. The dialog assumes a default file extension(\*.amt) and displays existing data files to prevent overwriting.

## **PRINT SETUP DIALOG**

This dialog allows the user to select a printer or run the setup to set paper size, etc. Your default printer is highlighted and will be used if you don't select another. Double clicking on a printer or selecting a printer and clicking on OK will select that printer for use.

## **EXPORT DIALOG**

This dialog allows the user to save an amortization schedule as a *quote and comma delimited* file for import into a spreadsheet. The dialog assumes a default file extension(\*.wkt) and displays existing data files to prevent overwriting.

## **PARAMETERS DIALOG**

This dialog allows the user to select specific parameters that affect the appearance of the amortization.

Selections include:

Start Year

Balloon Payment Month

Annual Payments

Days until 1st Payment

Date of 1st Payment

Start Month

Year End

**Start Year**

The year that the first payment on the loan is due. If you are creating an amortization for a business, this should be the fiscal year.

**Balloon Payment Month**

The payment number(month) that a balloon payment that pays off the loan is due.

**Annual Payments**

The number of payments each year. Most mortgages and installment loans have monthly(12) payments. You are also allowed to select semi-monthly(24), quarterly(4), or annual(1) payments.

**Comparison Increment**

The dollar amount used in the Payment Table Window to increment the loan principal for comparing payments at different principal amounts.

**Days Until 1st Payment**

The number of days until the first payment is due on the loan. This is normally 30 days(default) for a mortgage and 30 to 45 days for an installment loan. The number of days will affect the amount of interest paid on the loan. It should represent the time between the date the loan was made and the date the first payment is due. If in doubt, use the default.

**Date of 1st Payment**

The date the first payment is due on the loan. This date will print on the Amortization Schedule next to the number of payments and is for information purposes only. It will not affect the payment or interest.

**Start Month**

The month that the first payment is due. Must be selected by clicking on the list.

**Year End**

For a business that has a fiscal year different from the calendar year, this is the last month of the fiscal year. For individuals this is December.

**Rule-of-78 Interest**

Rule-of-78 interest is the type usually used with installment loans. It is weighted toward charging more interest in the early months of a loan to make up for early pay-offs.

**Simple Interest**

Simple interest is the type usually used with mortgage loans. It is calculated by multiplying the monthly interest rate times the outstanding balance. This amount is then subtracted from the payment and the rest is applied to the principal.

## **About**

This pulldown item displays basic info about the program including version number.

## **PC STATUS DIALOG**

This dialog displays basic information about your computer. Certainly not necessary for an amortization, but good information to have.

This information should be valid. However, if you do not have an IBM or compatible clone some of the data could be erroneous.

## **AMORTCALC** for WINDOWS™

**A companion program for Master Amortizer  
from Audit Planning Services  
Copyright © 1993. All Rights Reserved.**

This program is designed to be run from Master Amortizer. However, you can run it stand-alone for a quick answer to the unknown value of a loan equation.

You must enter three of the variables to solve for the fourth. For example: if you want to pay \$500 toward a \$20,000 loan at 8.25% the program will tell you the duration of the loan.

Click on  to calculate. Click on

 to clear all variables.

### **Note:**

A certain payment amount never pays off a loan amount in exactly the number of months chosen. The last payment is always a little more or less than the other payments. For this reason, calculating a loan amount, interest rate, or duration will never come out exact. You should round the result to the most logical number.

**For example:** a \$50,000 loan at 8.00% for 30 years would require a payment of \$366.88. If you enter this same payment at 8.00% for 30 years, the program calculates a loan amount of \$49,999.69. This is not an error. In real life the last payment will vary to make up the difference.

## **AMORTIZATION WINDOW**

This window displays an amortization schedule based on the parameters chosen and information entered into the Edit Dialog. You can also review the affect of increasing payments or the balance of the loan at the end of any period.

## **PAYMENT TABLE WINDOW**

This window displays a comparative payment table. Payments are based on different interest rates (along the left side) and at different principal amounts (along the upper center) based on the interest rate and amount currently selected and on the Comparison Increment set in the Window. Use the up/down arrows next to the increment to change its value. The payments will change as amount, interest rate, or duration changes.

### **Click on:**

to print the Payment Table on the currently selected printer.

## **MORTGAGE TABLE WINDOW**

This window displays comparative monthly payments and total amount paid for a loan at different durations. Amounts are based on the data in the Edit Dialog, calculated for progressive durations. Durations start at ten years and progress in five year increments up to thirty-five years. The payments will change as parameters, interest rate, or data changes.

**Click on:**  
to print the Mortgage Table on the currently selected printer.

## Creating an amortization

### To create an amortization:

- 1 Select **Variables** from the **Edit** menu to open the Edit Dialog.
- 2 Enter the amount of the loan, the interest rate, the type of interest, and the number of years.
- 3 Select **Parameters** from the **Edit** menu to open the Parameters Dialog.
- 4 Select the year the loan begins, the month of any balloon payment, the number of payments per year, the number of days till the first payment, the date of the first payment, the month that the loan begins, and the month that ends your fiscal year.
- 5 Select **Amortization** from the **View** menu.
- 6 You can minimize the Amortization Window, change your data and create a new amortization to compare with the first.
- 7 You can also review the affect of increasing your payment or the remaining balance at the end of any period.

### Related Topics

[Printing an amortization](#)

## Printing an amortization

### To print an amortization:

- 1 Perform steps 1 through 6 of the procedure titled: Creating an amortization.
- 2 In the Edit Variables Dialog, make sure you have checked print description and print By/For if you want this information printed.
- 3 Select **Print Setup** from the **File** menu if you want to select a printer or run the printer setup.
- 4 Select the **Print Button** or close the dialog and select **Print** from the **File** menu.

### Related Topics

Affecting appearance

## Exporting an amortization file

### To export an amortization file:

- 1 Perform steps 1 through 6 of the procedure titled: Creating an amortization.
- 2 Select **Export** from the **File** menu.
- 3 Enter a name for the file in the **Export Dialog** and click OK. The dialog displays existing export files to prevent overwriting and allows selection of other directories.

## Saving data for future use

### To save data for future use:

- 1 Select **Save** from the **File** menu, if you have made any changes to the data.
- 2 A save dialog gives you the option of saving the changes to the initialization file or selecting NO to open the **Save As Dialog** .
- 3 Enter a name for the file in the **Save As Dialog** and click OK. The dialog displays existing data files to prevent overwriting and allows selection of other directories.
- 4 If you know you want to save the changes to a new file, select **Save As** to begin with.

## Affecting appearance

### To change the appearance of an amortization:

- 1 Select **Variables** from the **Edit** menu to open the Edit Dialog.
- 2 Enter a description for the loan and the Name and address for a "Prepared by" and "Prepared for" message.
- 3 Check the **Print Description** and the **Print By** boxes to have them printed on the amortization.

## Solving Unknowns

To solve for unknown variables in a loan calculation:

- 1 Select **AmortCalc** to run the AmortCalc program.
- 2 You must enter any three of the variables for the loan and the program will calculate the fourth.
- 3 Select **Help** in the AmortCalc program for a discussion of calculations.

## Command Buttons

The command buttons execute the following commands:

Executes the Open command of the **File** Menu.

Executes the Save As command of the **File** Menu.

Executes the Print Setup command of the **File** Menu.

Executes the Export command of the **File** Menu.

Executes the Edit Variables command of the **Edit** Menu.

Executes the Parameters command of the **Edit** Menu.

Executes the Payment Table command of the **View** Menu.

Executes the Mortgage Table command of the **View** Menu.

Executes the Schedule command of the **View** Menu.

Executes the PC Status command of the **View** Menu.

Executes the **WINDOWS™** Calculator.

Executes the AmortCalc Program.

Executes the **Help Index** .
